Summary

AI Engineer building production agents across the Microsoft ecosystem – Copilot Studio, MCP, Power Automate, Dataverse – and shipping an end-to-end LLM product solo. Full-time working rights (485 visa).

Professional Experience

Junior Integration & Automation Analyst

Corrs Chambers Westgarth

Sydney, Australia

Mar 2026 - Jul 2026

- Led end-to-end architecture of a trusted knowledge-management agent: chose the Microsoft stack and designed the Dataverse data model and ingestion workflows that make every stored answer verifiable.
- Delivered and piloted the agent across five platforms – ServiceNow, SharePoint, Loop, NetDocs and Intapp – letting staff query trusted knowledge and submit articles through an AI-assisted review flow.
- Built a daily agent flow calling the Boomi API to pull production logs, AI-analyse failures and route findings to the support team – replacing ~30 minutes of daily manual triage.
- Prototyped natural-language creation of Boomi integration flows from a Copilot agent: payroll staff describe a need and the agent builds the flow, database connection and a simple front end via the Boomi Flow API.
- Engineered reusable agent Skills that raised answer accuracy while cutting per-query Copilot Credit cost across the firm's Copilot Studio agents.

AI Engineer

Stepping Stone House

Sydney, Australia

Jul 2026 - Aug 2026

- Built and published two Copilot Studio agents now used by 10+ staff, grounding answers in curated Markdown knowledge via MCP tool calls and purpose-built agent Skills.
- Built a C#/Python desktop tool converting 15+ document, audio and web formats into agent-ready Markdown via MarkItDown, faster-whisper and Playwright, powering the agents' curated knowledge base.
- Automated audit archiving of Teams AI meeting notes: a weekly Power Automate workflow pulls ~10 meetings' notes via the Microsoft Graph meeting AI insights API, converts them to Word and files them in SharePoint.

Software Engineer

Newtouch Software Co., Ltd.

Shanghai, China

Aug 2022 - Apr 2023

- Developed Java/Spring Boot microservices and RESTful APIs, and designed the MinIO storage migration.
- Containerised services with Docker and ran CI/CD pipelines on Linux for repeatable releases.

Projects

Joblit – AI Job Search Platform

Next.js, TypeScript, Prisma, PostgreSQL, Claude | [GitHub](#) | [Live App](#)

Sydney, Australia

Jul 2025 - Present

- Architected and shipped a local-first AI platform solo: versioned prompt contracts, strict Zod validation of any LLM's JSON, no server-side model keys, backed by 2,100+ automated tests across five CI gates.
- Built deterministic evaluation gates: an evidence ledger that blocks unsupported AI claims before publication, and an ATS PDF validator enforcing page, text-layer and keyword-coverage rules.

Project Contest Platform

Java, MySQL, RabbitMQ, Docker, AWS | [Live App](#) | [Runner-up, Coding Fest 2025](#)

Sydney, Australia

Feb 2025 - Jun 2025

- Built backend microservices with Spring Cloud and secured authentication with OAuth2/JWT; event-driven messaging via RabbitMQ powers real-time notifications across services.
- Delivered end-to-end JUnit testing and automated Docker CI/CD deployment across services.

Skills

Microsoft & Power Platform: Copilot Studio (Agents, Flows, Skills), Power Automate, Power Apps, Dataverse

AI & Agents: RAG, Model Context Protocol (MCP), LLM Orchestration, Prompt & Context Engineering

Integration & Data: Boomi, ServiceNow, Dataverse Data Modelling, REST APIs, SQL, Playwright

Engineering & Cloud: Java, Spring Boot, Python, TypeScript, React, Next.js, Azure, AWS, Docker, GitHub Actions

Education

University of New South Wales – Master of Information Technology

WAM 82.4/100, Excellence Honours

Sydney, Australia

Sep 2023 - Jun 2025

Jiangsu University of Science and Technology – Bachelor of Engineering

Jiangsu, China

Sep 2016 - Jun 2020
